

L115/L117

Voorwood's L115/L117 series machines provide modular workstations that can profile and sand, and then apply dry transfer finishing foil to your parts in one pass.

- Quick and easy changeover.
- Digital readouts on programmable logic controls save time with touchscreen operation of customer profile library.
- Foiling station(s) equipped with 203 mm (8") diameter foil wheel, non-contact sensor and oven for automatic temperature control.
- Optional top and bottom score saw to accurately score the part prior to shaping, for a smooth, clean edge.
- Transporter feed speeds from 35-50 FPM.

L115/L117

Customized to your specific needs, these configurations available:

The foil unwind has a large capacity with accurate tracking and constant tension adjustments. The adjustable torque rewind is conveniently located for removal of used foil.

An optional outfeed extension module with an adjustable grooving saw provides edge foiling and drawer-bottom groove in one pass.
